

[ULTRA-THIN SURFACE MODIFICATION SYSTEM]

Abstract

This invention provides a thin laminate for modifying the appearance of a surface. The laminate includes a carrier film disposed against the lower surface of an indicia containing layer. The laminate may optionally include a bonding coat for attaching the laminate to a surface, at least one removable protective layer, and a release coating for facilitating the transfer of the laminate on a surface. The invention also provides methods and systems for modifying the appearance of a surface using the laminate.
